Weathergroove 150 Natural

The right choice

When you purchase Weathertex you are buying from an ethically sound company that supports our environment, all the while creating a brilliant product we believe in. Now that's something to get behind... naturally.

Weathertex is a manufacturer of natural Australian hardwood weatherboards and architectural panels. Our products are made at the original 1939 factory using a unique process found nowhere else in the world.

Most Trusted Brand

Weathertex was voted Australia's Number 1 Most Trusted Brand for 2016 and 2018, in the Architecture and Design annual 'Top Trusted Brand' survey. With over 341 nominated brands and over 13,000 votes, this survey reveals Australia's top brands within the architecture, building, construction and design industries. Weathertex also won Number 1 Most Trusted Brand Winner in the 'External Wall Materials' category.

Our 'Green' Accreditations

100% Australian owned and manufactured, Weathertex uses certified state forest or private hardwoods from controlled sources. Proud and determined to promote environmental and sustainable performance measures, we have worked hard to ensure our products are third party accredited. Weathertex has been through a rigorous life-cycle evaluation from Global GreenTag to determine our "green performance" and we are proud to announce we have the FIRST GLOBAL manufactured product to receive a Platinum certification with a GreenRate Level A for our Natural products, and Gold Certification for all our flat primed profiles.

Global GreenTag International have designed a Product Health Declaration (PhD) to assess chemical hazards of each ingredient throughout the product lifecycle, and the risk associated with exposure and handling. We have been assessed using this system in an attempt to be even more transparent with our customers in regards to the safety of our products.

In 2017 Weathertex was added to the International Living Future Institute Declare Label database. Declare is a voluntary program aiming to transform the building materials industry towards healthier products. The labelling answers three important questions - Where does a product come from? What is it made of? Where does it go at the end of its life?

We are also 100% Certified as Chain of Custody through the Programme for the Endorsement of Forest Certification, or PEFC. The Programme is an international non profit, non-governmental organization dedicated to promoting Sustainable Forest Management through independent third-party certification. With over 30 endorsed national certification systems and more than 240 million hectares of certified forests, PEFC is the world's largest forest certification system. PEFC works through the entire forest supply chain promoting good forest practices and ensuring products are produced following the highest ecological, social and ethical standards.

For more information on our environmental standards and certifications, visit <http://www.weathertex.com/nz/about-us/certifications-partners/>

The right benefits

- **BRANZ Appraised** - for the various installation systems. Appraisal numbers 511, 512, 513 and 514.
- **Third Party Sustainable Credentials** - With a better than zero carbon footprint - GreenTag certification, PhD and Declare labeling.
- **Warranty** - Guaranteed not to rot, split or crack for up to 15 years on Natural and 25 years on Primed.
- **Value for money** - install benefits help save on labour and time costs.
- **Easy to install** - only standard carpenter's tools are required. Lightweight material with off-stud joining options.
- **Longevity** - natural Australian timber, made to last.
- **Termite Resistant** - Sugars and starches are removed.
- **Safe** - can be sawn or cut indoors.
- **Reliable** - Voted Number 1 'Most Trusted Brand' of Architecture & Design 2016 and 2018 Australia. Also category winner in 'External Wall Materials.'
- **Australian made and owned** - proudly made in Australia.

Weathergroove150 Natural

Weathergroove 150 Natural

Natural Cladding

The Natural range is an unprimed board which provides a unique appearance, with the characteristics and looks of raw, undressed timber. The Natural surface is pressed to create a woodgrain effect. Its rough, deep cut pattern shows all the knots, grains and imperfections of natural timber. It can be left to weather naturally or be stained.

When allowed to weather naturally, the depth of colour will vary, subject to location and sun exposure allowing for unique styles.

The Natural Range weatherboards and panels are covered by a 15 year warranty not to rot, split or crack. Please see the warranty section of the Weathertex website for full details.

Natural Styles

This guide explains the three main techniques to treat the Natural Range (unprimed) weatherboards and panels; Sun bleaching, staining and maintaining. Please refer to the installation manual for warranty and technical information.

RETAIN ORIGINAL COLOUR

Weathertex Natural begins as a dark hardwood colour (pictured). Left uncoated it will lighten. To retain the original colour the boards should be stained.

If the boards lighten but you want to restore them to their original colour, you can do so at any time. Clean the boards with an appropriate deck cleaner and a sturdy deck cleaning brush before staining.

UNSEALED (Naturally Lighten)

Left to weather naturally by the sun, the timber will lighten and 'silver off' after a period of time. This can produce some beautiful results that become a unique feature of the construction. For best results use this technique on buildings that are exposed to full sun and aren't obscured by fences, trees or awnings. Weathertex is made with Australian hardwood timber and colours may slightly vary season to season.

To stop the silvering off process the boards can be stained at any time which will protect the boards from the sun, as well as allow for a range of colours and depth. Boards can be brought back to their original dark colour by first scrubbing with a deck cleaner and then applying the appropriate coloured stain.

COLOUR STAIN & SEALED

Weathertex Natural range can be stained and sealed in the same manner as other hardwood timbers. Wash the boards down first with deck cleaner. Make sure the boards are clean and dry before staining. When staining follow the direction of the cladding to ensure each board has an even coating.

Coat the boards with a soft brush first before cutting in the edges. Add another coat, then cut in again. A third coat is optional but recommended, and there is no need to cut in the edges again on the third coat. Keep a wet edge throughout to make sure visible layers aren't seen on the finished product. Stopping and starting during coating may lead to an uneven finish as the stain will dry in uneven layers.

We don't recommend a clear coats or varnish, as water based stains with pigment help protect the timber from UV. Maintenance of the stain is required to stop fading over time. Please make sure to follow all stain product instructions as they may vary.

0 MONTHS: Recently built, this shows the beginning colour of Weathertex Natural boards.

4 MONTHS: The board shows signs of lightening.

7 MONTHS: The board is continuing to lighten.

17 MONTHS: The boards are now a light blonde colour.

36 MONTHS: The boards are now very light, and are about to begin to be restored.

CLEANING: Wash the boards with a deck cleaner and a firm brush.

STAINING: Stain in the same direction that the boards run - vertical for vertical cladding.

COMPLETE: After 3 coats the timber is restored and is now UV protected.

Note: This project is only an example of the lightening and restoring process. Different projects will lighten at different speeds depending on location and exposure to sunlight.

Selflok Weatherboards

A favourite in the Weathertex family, Selflok Weatherboards have the simplest self-locking system, which allows every board to self gauge. The precise routing gives the product that beautiful and unique ship lapped profile that makes it the first choice for many.

In the Selflok range are the increasingly popular Selflok Ecogroove Weatherboards. The Selflok Ecogroove Smooth is the ideal choice for a smooth-to-touch finish, whereas the Selflok Ecogroove Woodsman provides the distinct wood grain texture of natural timber. Both are available in varying sizes.

Advantages

- The unique lapping system allows a quick and easy installation.
- It is a durable and lightweight product.
- Requires only standard woodworking tools.
- Pre-primed.
- No LRV restrictions. Can be painted in dark colours without affecting warranty conditions.

Primelok Weatherboards

Our exclusive Weathertex Primelok fixing system ensures a perfect and easy alignment of the boards, reducing installation time. The overlapping of each board conceals fixings, resulting in smooth, clean, straight lines.

Primelok Weatherboards are suitable for gun nailing installation, and pre-primed as a standard feature.

Advantages

- The unique lapping system allows a quick and easy installation.
- It is a durable and lightweight product.
- Requires only standard woodworking tools.
- Pre-primed.
- No LRV restrictions. Can be painted in dark colours without affecting warranty conditions.

Weathergroove Panels

Weathergroove is the largest panel available in the New Zealand market. This vertically grooved panel is ideal for covering large areas in a short time and it's versatility offers endless possibilities.

For improved performance, an exclusive joining system has been designed to clip onto the rebated edges of each panel, blending in perfectly with each Weathergroove sheet for a continuous panel finish. Please see the Weathertex Installation Manual for details.

Advantages

- Off-stud joining system
- Quick installation
- No sealant or adhesives required for sheet jointing installation
- Pre-primed
- 3660mm height panel size - the largest available in the market
- Requires only standard woodworking tools.
- No LRV restrictions. Can be painted in dark colours without affecting warranty conditions.
- Available also in Natural.
